

SALMAN ALI

Java Backend Developer | B.Tech Computer Science & Engineering Student

Phone: 9651117946 | Email: salman.9651.ali@gmail.com

GitHub: github.com/SalmanAli-sketch | LinkedIn: linkedin.com/in/salman-ali-36390330a

PROFESSIONAL SUMMARY

B.Tech Computer Science & Engineering student with a strong foundation in Core Java, Object-Oriented Programming, Collections, Exception Handling, Multithreading, Java 8, SQL, PostgreSQL, MongoDB, and JDBC. Hands-on experience developing Java-based applications involving transaction processing, database integration, object-oriented design, and data management. Familiar with Git, GitHub, JUnit, database administration tools, and software development environments. Currently expanding backend development skills in Spring, Spring Boot, REST APIs, Docker, AWS, and modern frontend technologies.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering

Allenhouse Institute of Technology | 2023 – 2027

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering

TECHNICAL SKILLS

Programming Languages: Java, C++

Core Java: OOP, Collections Framework, Exception Handling, Generics, Multithreading, Java 8

Databases & Database Technologies: SQL, PostgreSQL, MySQL, MongoDB, JDBC

Computer Science Fundamentals: DBMS, Operating Systems, Computer Networks

C++ / DSA: C++ STL, Basic Data Structures & Algorithms

Development & Version Control Tools: Git, GitHub, IntelliJ IDEA, Visual Studio

Database Tools: pgAdmin, MySQL Workbench, MongoDB Compass

Testing: JUnit

Currently Learning: Spring, Spring Boot, REST APIs, Docker, AWS, HTML, CSS, JavaScript, React

PROJECTS

Banking Transaction System | Java | PostgreSQL | JDBC | Multithreading

- Developed a Java-based banking application for managing account operations and transaction workflows.
- Implemented object-oriented design principles for organizing banking entities and operations.
- Applied exception handling to manage invalid transactions and application-level errors.
- Implemented transaction-oriented logic with concepts of multithreading.
- Integrated the application with PostgreSQL using JDBC for persistent data management.

Stock Trading Simulator | Java | OOP | Collections

- Developed a Java-based application simulating stock trading workflows and transaction operations.
- Applied object-oriented programming principles to model trading-related entities and operations.
- Used Java Collections for managing and processing application data.
- Implemented transaction-oriented logic to simulate buying and selling workflows.
- Practiced modular application design and Java programming concepts through the project.

Student Management System | Java | OOP | Collections | PostgreSQL | JDBC

- Developed a menu-driven Java application for managing student, teacher, team, and event information.
- Applied OOP concepts including inheritance, interfaces, encapsulation, and method overriding.
- Organized the application using packages and modular class structures.
- Implemented searching and data-management operations using Java Collections.
- Integrated PostgreSQL using JDBC for database connectivity and persistent data management.
