PROFESSIONAL SUMMARY

B.Tech CSE (AI & ML) student with practical experience in **backend development using Java and Spring Boot**. Proficient in developing REST APIs, implementing secure authentication with Spring Security and JWT, and managing relational databases using JPA, Hibernate, MySQL, and PostgreSQL. Experienced in multithreading, third-party API integration, layered architecture, Docker, and backend deployment. Passionate about building scalable backend applications and integrating AI capabilities into real-world software solutions.

TECHNICAL SKILLS

Languages:	Java, C++
Core Java:	OOP, Multithreading, Java 8 Features, Java Streams, Collections, Exception Handling
Backend:	Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Spring Security, JWT, Microservices
Databases:	MySQL, PostgreSQL, MongoDB
Architecture:	MVC, Layered Architecture, Design Patterns, API Design
Testing:	JUnit, Mockito
DevOps & Deployment:	Docker, CI/CD, Vercel
Version Control:	Git, GitHub
AI:	AI API Integration
Tools:	Maven, Postman, IntelliJ IDEA, VS Code, MySQL Workbench, pgAdmin, MongoDB Compass

PROJECTS

Financial Trading Learning & Simulation Platform

Spring Boot | Microservices | Spring Data JPA | PostgreSQL | REST APIs | Multithreading | Docker | CI/CD

- Built a financial learning platform where users study stock-market concepts and practice trading with virtual money.
- Developed modules for users, virtual wallets, stocks, buy/sell operations, portfolios, transactions, lessons, and performance tracking.
- Created REST APIs for trades, balances, portfolios, transactions, and learning content using Spring Data JPA and Hibernate.
- Implemented scheduled multithreaded processing to update simulated stock prices every 5 seconds and integrated external market-data APIs.
- Containerized backend services with Docker and configured CI/CD deployment workflows.

Banking Transaction System

Spring Boot | Spring Data JPA | MySQL | Spring Security | JWT | REST APIs

- Developed a secure banking backend for accounts, deposits, withdrawals, fund transfers, and transaction history.
- Built REST APIs with Spring Boot, Spring Data JPA, and MySQL for persistent data management.
- Implemented Spring Security and JWT authentication for protected API access.
- Applied Controller–Service–Repository layered architecture for maintainable backend design.

AI-Powered Financial Assistant

Spring Boot | REST APIs | Spring Data JPA | PostgreSQL | AI API Integration

- Built a backend financial assistant combining application financial data with an external AI/LLM service for contextual responses.
- Created APIs to receive user queries, retrieve relevant financial data, and process AI requests.
- Stored and retrieved financial data using Spring Data JPA and PostgreSQL.

MINI PROJECTS

Student Management System — Spring Boot | Spring Data JPA | MySQL | REST APIs

Developed student registration and CRUD APIs, integrated MySQL persistence, and applied Controller–Service–Repository architecture.

Hospital Management System — Spring Boot | Spring Data JPA | MySQL | REST APIs

Developed APIs for patients, doctors, appointments, and hospital records; modeled entity relationships using JPA/Hibernate and applied layered architecture.

EDUCATION

B.Tech — Computer Science & Engineering (AI & ML) | 2023–2027 | Allenhouse Institute of Technology, Kanpur

DSA & PROBLEM SOLVING

DSA: Arrays, Strings, Linked Lists, Stack, Queue, Hashing, Searching, Sorting

ACHIEVEMENTS

- Adobe University Hackathon — Participant, Unstop
